

Web Application Programming
Faculty of Mathematics and Information Science
Warsaw University of Technology

Paweł Pozorski
11.10.2024

Overview

The following report is meant to describe "The Imperial Book Database", a django-based web application following modern web programming trends.

Its main purpose is to serve users book reviews in a simple, not disturbing format, allowing them to focus on website content rather than eye-catching state-of-the art dynamic components. Thanks to multiple filtering options, one can search for their favorite book and later explore its reviews or deepen their knowledge about author and his / hers other creations and awards.

For technical detail, it uses django python library as a backend also serving front-end .html files generated via django's jinja-based template engine. It's designed to remain as efficient as possible, allowing for serving content to many users concurrently without extensive server-unkeep bills. Therefore, much effort was put to create objects following best sql-related practices, including creating indexes. To guarantee site stability, entire project is separated into 5 independent apps, each one has a 100% coverage in unitests and serves different purpose.

Project Requirements

The following requirements were requested:

- allow users login and password reset
- there are normal user, manager and backend admin roles
- the application allows only the logged-in user to access restricted resources
- at least 2 tables with items browsable by the regular user, which can be filtered
- the application is aesthetically pleasing
- the application is responsive (i.e. adapted to at least two resolutions - e.g. computer and tablet or computer and smartphone)
- all forms data is validated
- the application allows you to save or modify records
- use of AJAX technology or similar technique
- The application follows good programming practices
- The application has no difficulty in deployment on a separate machine
- Automatic tests
- short report with idea outline, dataflow and main views screenshots
- source codes

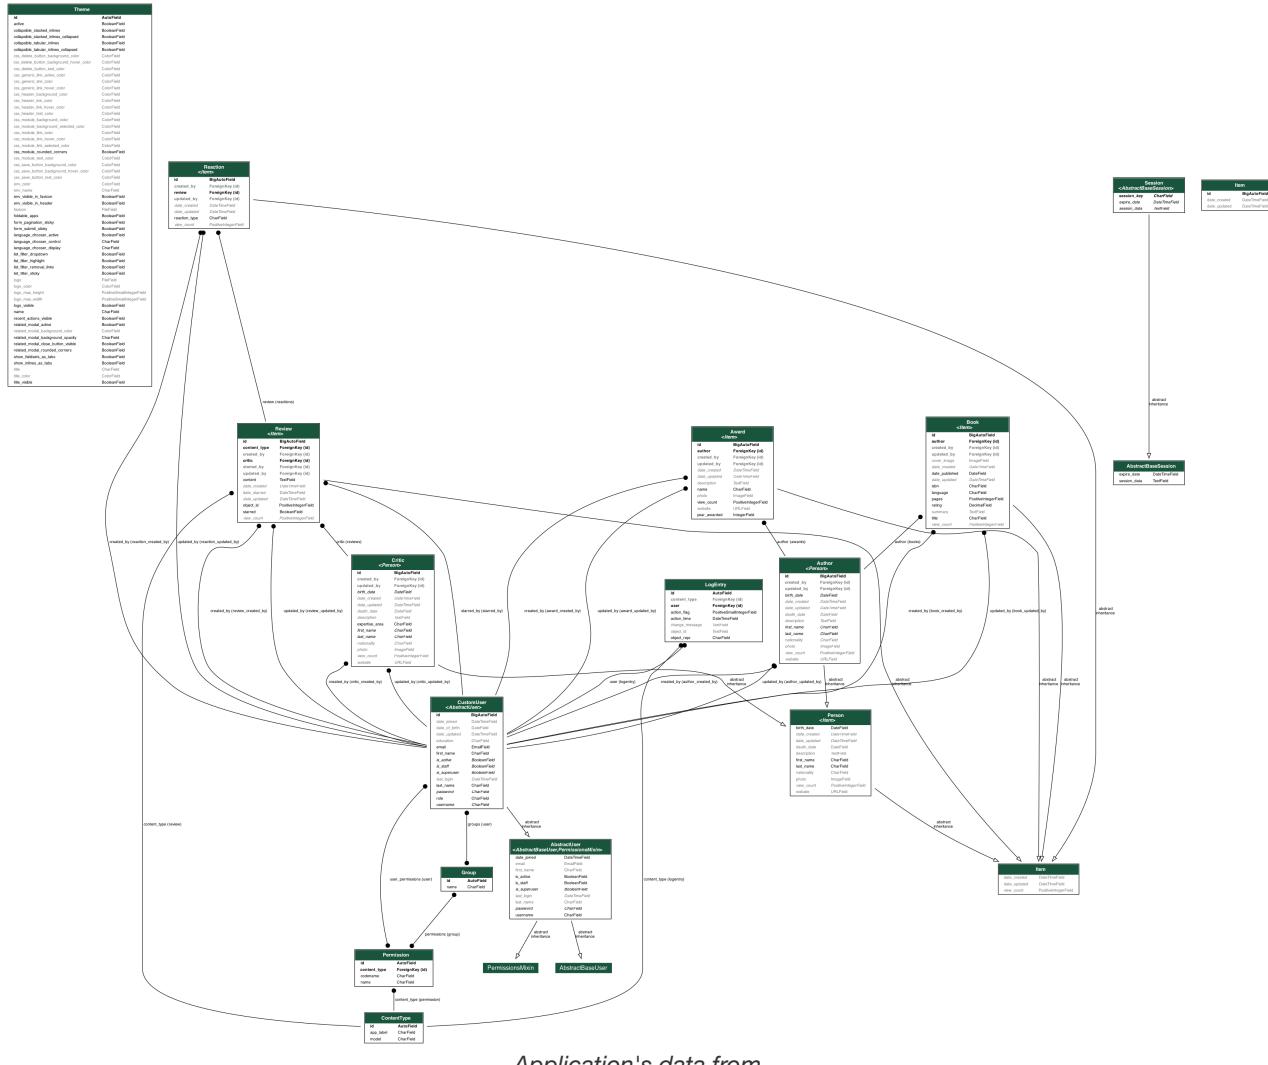

In the following examples, besides project usage documentation, the proof of their completion will be given.

Documentation

Data Flow

Please keep in mind that even though the following chart looks complicated, many of these classes are django system - defined classes for managing admin theme, action's history and more.

Classes holding actual business data are Reaction, Review, CustomUser, Critic, Author, Award and Book.

Home page

Here is short project description with url link leading to [contact](#), encouraging users to share their thoughts and complains with website admins.

Underneath them there is a card with links to main content subpages, which are [books page](#), [authors page](#) and [critics page](#) with short encouraging description and stats on number of objects available in the database. Please note that database that will be deployed in provided .Dockerfile will have different amount of auto-generated, meaningless objects just to create simple website demo.

Website header is also straight-forward, with url links to all user-reachable subpages.

Welcome!

You arrived at the stunning website made to bring back the beauty of literature to the masses. You will be easily capable of searching for any book in our database, searching for their reviews, authors, and many more.

Please keep in mind that we're still under development. Report any bugs and contact us via the form [here](#).

Home Page for admin user. As he can access manager panel, link for it is displayed as well.

The screenshot shows the homepage of "The Imperial Book Database". At the top, there's a blue header bar with the logo and navigation links: Profile, About, Contact Us, Admin Panel, and Logout. Below the header, a large white box contains a "Welcome!" message and a note about the site being under development. Three main sections are displayed below: "Books" (with a count of 46), "Authors" (with a count of 31), and "Critics" (with a count of 25). Each section includes a brief description, total counts, and timestamped first and last additions.

Home Page for admin user. As he can access admin panel, link for it is displayed as well.

Contact Page

It allows to contact the website admins. If all fields get validated (restrictions are showed in smaller font under input fields), the mail will be set to predefined email address with filled in data. For simplicity of deployment and due to lack of sfmtp, for now these info will be just printed to a console.

The screenshot shows the "Contact Us" page. It features a blue header bar with the logo and navigation links. The main content area has a blue header "Contact Us". It contains three input fields: "Email*", "Subject*", and "Message*". Each field has a placeholder and a small explanatory text below it. A "Contact Us" button is at the bottom.

Contact Page with simple form.

About Page

It is meant to familiarise the consumer with project's idea and goals.

About This Project

You arrived at the stunning website made to bring back the beauty of literature to the masses. You will be easily capable of searching for any book in our database, searching for their reviews, authors, and many more.

About Me

I am a Data Science student at the Warsaw University of Technology (WUT). This project is developed as part of my classes to apply the knowledge I've gained and to create a useful resource for book lovers. Through this website, I aim to combine my passion for literature with data science by providing an easy-to-use platform for exploring books and their reviews.

Official Info

Course Name:

Programming of WWW Applications course for DS studies in Winter 2024/25

Project Requirements:

About Page with 3 separate cards serving project's related informations.

Profile Page

Here user can govern his/hers profile and check personal data.

 A screenshot of a 'User Profile' page. The top bar is blue with the title 'User Profile'. Below it is a section titled 'Personal Information' containing a table of user details:

Username	manager
First Name	Manager
Last Name	Manager
Email	manager@gmail.com
Date of Birth	Not provided
Role	user
Education	primary
Date Joined	Oct. 9, 2024, 12:38 p.m.
Last profile update date	Oct. 11, 2024, 3:25 p.m.

 At the bottom are three buttons: 'Update Account' (yellow), 'Change Password' (red), and 'Remove Account' (red).

User Profile Page card. On the bottom 3 options are available, presented on following photos.

 A screenshot of an 'Update Profile' page. The top bar is blue with the title 'Update Profile'. It contains two input fields: 'Email address*' with the value 'manager@gmail.com' and 'Education' with a dropdown menu set to 'Primary'. At the bottom is a blue 'Update Profile' button and a link 'Go back to profile.'.

Update profile card, with all user editable fields available for change. Please note that after that user's 'Last profile update date' will be updated as well.

Old password*

New password

- Your password can't be too similar to your other personal information.
- Your password must contain at least 6 characters.
- Your password can't be a commonly used password.
- Your password can't be entirely numeric.
- Your password must contain at least one lowercase letter, one uppercase letter, one digit and one special character.

New password confirmation

Enter the same password as before, for verification.

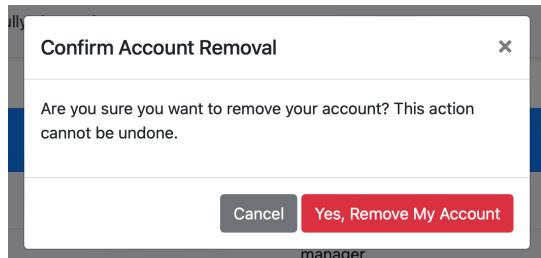

Set New Password

[Go back to profile.](#)

Set new password form. All password restrictions are shown.

Role	user
Education	primary
Date Joined	Oct. 9, 2024, 12:38 p.m.
Last profile update date	Oct. 11, 2024, 3:42 p.m.

Page after successful user's password update. Pay attention to success communicate and updates user's account update date.

Confirm account removal pop-up.

Objects Pages

As they have following structure, only one is described below.

Book List Page

It shows the table of all database's books available. If more than 10 books are stored, they will be presented in a pagination table. On the top filtering options are available. Books are listed in popularity-descending-order, where book with most views gets popularity of 10, and with no views - 0.

Table's rows are buttons redirecting to corresponding object's details subpages. If any of cells have a blue - hyperlink - text, it also leads to this cell's corresponding object's details subpage.

Author Page

Besides to cards common with book page - such as Details and summary (displayed as short story), author can receive rewards. If they have one, their 'awards-stats' will be displayed as well. Some statistic are also calculated for their publication, displayed in different card. Same as in book (and later in Critic), if no author's photo is provided, default will be displayed.

Author's publications**Publications Number:** 3**First Publication Date:** Jan. 28, 2020**Last Publication Date:** Nov. 16, 2023**Career Span:** 3 years**Mostly viewed book:** [Left name official author.](#)**Best rated book:** [Left name official author.](#)**Mostly reviewed book:** [Left name official author.](#)

Authors publications statistic. Career span is date difference between last and first publication.

Author's awards summary**Awards Number:** 2**Firstly awarded at:** 2003**Lastly awarded at:** 2016

Authors awards statistic.

Author's Awards**Pm Award - 2016**

Ability watch local. Stop way trial role.

**Push Award - 2003**

Third event one source national because. Draw behind could direction. Billion give however phone so ...

Authors awards with short description. Arrow on the right is a button redirecting to award's detail page.

Author's Reviews

No reviews available for this author.

Author's Awards

No awards available for this author.

If no data is available, user will be notified. Awards are also restricted only to authorised users.

Award Page

"Pm Award"

Reviews's list. Manager can easily star and unstar it via custom action

Admin Panel

Admin can also view all users and deactivate selected one. Being admin does not means being manager.

Superadmin is a website super-admin with full access to its customization and users. Can delete them or change their roles. No role is more powerful than that. He can also add custom groups and assign them permission, then give them to selected users. Only one is created by default by django.

Change group

Staff

Hold down "Control", or "Command" on a Mac, to select more than one.

Chosen permissions

Remove all

Staff - manager group - permissions view from super admin panel. Accessible only for admins.

Technical Appendix

Deploying

Using docker

```
# in the same dir as readme
docker build -t "book-shop" .
docker run -p 8000:8000 "book-shop"
```

Natively

```
# in the same dir as readme
pip install -r requirements.txt

# in book_shop home dir (one with manager.py)
# python manage.py makemigrations
python manage.py migrate
python manage.py collectstatic

echo "from django.contrib.auth import get_user_model; \
User = get_user_model(); \
User.objects.filter(username='admin').exists() or \
User.objects.create_superuser('admin', 'admin@example.com', 'admin', first_name='admin', last_name='admin')"
| python manage.py shell

python manage.py shell < book_shop/generate_examples.py
gunicorn --timeout 120 --workers 2 --threads 3 --bind 0.0.0.0:8000 book_shop.wsgi:application"
```

Tests

For each app there is a set of tests defined, checking weather access restrictions, forms validation, models restrictions, views behaviour and many more works properly. To launch them you need to run `python manage.py test` command in project root directory. This will yield following response:

```
book_shop % python manage.py test
Found 122 test(s).
Creating test database for alias 'default'...
Group "Staff" created successfully.
Group "Admin" created successfully.
System check identified no issues (0 silenced).

-----
Ran 122 tests in 8.115s

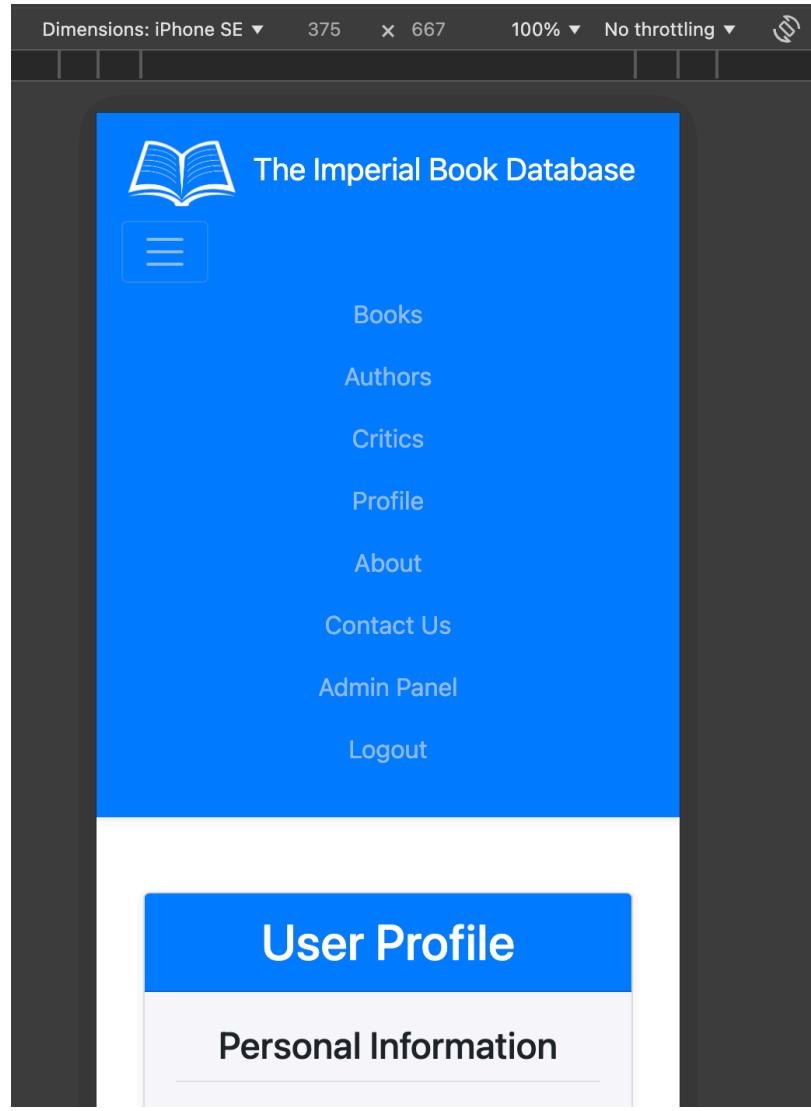

OK
Destroying test database for alias 'default'...
```

Database and static content serving

For example purposes we use django's build-in database, but it's pretty straightforward to replace it with any - also remote - sql database provider. For same reason we run server with `--insecure` option, as it also serves static and media files (that again, can be easily migrated to remote provider).

Support for no-pc devices

Thanks to bootstrap and jQuery, my app remains pretty and responsive regardless to device resolution.

The screenshot shows the TIBD Admin Panel interface on an iPad Air. The top status bar indicates dimensions: iPad Air, 820 x 1180, 65% zoom, and no throttling. The main header reads "TIBD Admin Panel" with a book icon. Below it, a navigation bar includes "WELCOME ADMIN" and links for "VIEW SITE / CHANGE PASSWORD / LOG OUT". The breadcrumb navigation shows "Home > Users > Users > manager". A green success message states: "The user 'manager' was changed successfully. You may edit it again below." The main content area is titled "Change user" and shows the user "manager" with the email "manager@gmail.com". The password field displays a hash value: "algorithm: pbkdf2_sha256 iterations: 870000 salt: vNulAB***** hash: REFlqig...". There is a "Reset password" button. Below this, there are three tabs: "Personal info", "Role info", and "Permissions". Under "Personal info", fields include First name: Manager and Last name: Manager. Under "Role info", Role is set to Manager and Education is set to Primary. Under "Permissions", the Active checkbox is checked. At the bottom are buttons for "Delete", "Save and add another", "Save and continue editing", and "Save".

Admin page on Ipad Air simulated by Google Chrome.
